ABSTRACT

A safety syringe needle protecting cover comprises a cover, a syringe tube and an elastic element. The cover has an outlet capable of being connected to a front end of a syringe cylinder. The cover receives a A syringe tube is a hollow tube for hiding the syringe syringe needle. The syringe tube is coupled to the outlet of the cover; the needle therein. The syringe needle is shielded syringe tube being movable in the outlet. by the syringe tube. An exposed end of the syringe tube has an injection The elastic element is an elastic element located along the axial direction of the syringe tube. Two end of the elastic element resisting against the outlet of the cover and the injection end of the syringe tube, By the elastic force of the elastic element, the syringe tube respectively. is pushed to the position hiding the syringe needle.
